This Eclipse will not be total at London; *but by Reason the Moon, at the Middle of the Eclipse, will have* 1 *Minute* 13 *Seconds visible South Latitude, there will a Thread of Light appear on ye North Side of the Sun: but it will be so very small, that it will not amount to above one Forty eight Part of his Body.*

In the North & East Parts of England, *& throughout* Scotland, *ye Eclipse will not appear so great, But in* South-Wales, *as also in ye South & South West Parts of* England, *as at* Glocester, *Bristol,* Exeter, *Salisbury,* Winchester, *&c. Also in* Ireland, *at* Waterford, Wexford, Limerick, *&c. As also in* France, *at* Roan, Paris *&c. In all these Places the Eclipse will be total. The North Part of ye Shadow of the Moon will pass over near* Worcester, *Oxford,* London, *Maidstone, &* Dongeness; *& in* France, *near* Boloign, *&c. But all Places to ye Northward of them will have ye North Side of ye Suns Body enlightned. And in ye North of* England, *as at* Newcastle, *Carlisle,* Durham, *Stockton, &* Hull, *they will have a considerable Quantity of Light on ye North, or rather ye North East Side of ye Sun, when ye Eclipse is at ye greatest. Again, ye South Limb of ye Moon's Shadow will pass near* Plymouth, *& all Places South or South West, but at* Wexford *& Waterford in* Ireland, *likewise at* Pembroke *in* Wales, *Milford Haven,* Bridgewater, *Somerton,* Shaftsbury, *Portsmouth, the Isle of* Wight, *as also at* Diepe *in* France *it will be total with Continuance. The Center of ye Moon's Shadow passes over or near these Places, & ye Darkness will be so great: that some of ye Planets & fixed Stars may be seen, to ye great Admiration & Surprize of ye Beholders; more especially* Mars, *Venus, &* Mercury *may be seen all to ye Eastward of the* Sun. Mercury *will be nearest to ye Sun, about as far from him as an Hour & a half Motion,* Venus *about as far to ye Eastward of* Mercury. *& Mars again about as far to ye Eastward of* Venus. *The bright Star, called* Aldebaran, *may also be seen very near ye Sun, but to ye Eastward also; & ye great Dog Star may be seen very near setting in the South West, & many other Stars will appear where ye Eclipse is total with Continuance, if the Air be clear.*

It will be very terrible & amazing to all that behold it in England, *but more especially in the more Southern parts, as* Portsmouth *& the Towns adjacent.*

Sold by Hen: Overton *at the White horse without Newgate.*
